Vulnerability Management as a Service (VMaaS)

At Solve, we understand that managing vulnerabilities is a critical aspect of protecting organisations from cyber threats.

That's why we offer comprehensive Vulnerability Management as a Service (VMaaS) to help you identify, assess, and remediate vulnerabilities across your entire IT infrastructure.

Our VMaaS service includes:

Vulnerability Scanning:

Our team uses state-of-the-art vulnerability scanning tools to identify vulnerabilities in your IT infrastructure, including servers, desktops, laptops, mobile devices, and network devices. We conduct both internal and external scans to ensure comprehensive coverage.

Vulnerability Assessment:

Once vulnerabilities are identified, our team performs a comprehensive assessment of the identified vulnerabilities to determine their severity and potential impact on your organisation.

Prioritisation and Remediation:

We prioritise identified vulnerabilities based on their severity and potential impact. We work with you to develop a remediation plan that addresses the most critical vulnerabilities first, reducing risk exposure.

Reporting and Analysis:

We provide detailed reporting and analysis on the vulnerabilities identified, including recommendations for remediation and mitigation. Our reporting helps you to make informed decisions about your vulnerability management strategy.

At Solve Solutions, we are committed to helping you manage your vulnerabilities and reduce your risk exposure.

Contact us today to learn more about our VMaaS service and how we can help you mitigate security threats.
